

ABSN 410 : Nursing Leadership Capstone

The nursing role includes acting as provider, manager and coordinator of care for individuals, families and communities. This includes planning health promotion through normative transitions across the life span, prevention of events that compromise health and management and maintenance of optimal health for persons with chronic illness and disability. Students will identify a health or health system issue and a targeted population. Using the nursing process, students will complete an assessment and develop a plan that will be evaluated and implemented.
