

MA 101L : Clinical Medical Assistant Practices Lab

The Clinical Medical Assisting Lab offers in-depth explanations of essential medical assisting concepts in a laboratory environment. This Lab provides an opportunity for the student to put into practice many of the concepts learned in CMA101, Clinical Medical Assisting. Topics include learning more about the patient care environment, practicing techniques used by the medical assistant, real-world simulation that gives opportunity for the student to explore legal and ethical guidelines, practice with job skills and duties, determining when and how to use professional resources and practice with using safety techniques. Students will reinforce the technical terminology, facts, theories, methods and principles associated with the role of the medical assistant in the ambulatory setting.
